INTERESTED IN RENEWABLE ENERGY FROM YOUR OWN SOLAROAD SURFACE?

Order your SolaRoad Kit now: a 10-metre, power generating road surface. Ideal for Business Parks, access roads, courtyards or squares.

The SolaRoad Kit generates 3500 kWh per year, the annual consumption of an average household. The Kit is available in various designs. With connection to the electricity grid (AC-or DC-net) or autonomous in combination with storage.

The SolaRoad Kit consists of four concrete elements with a hardened glass and translucent layer and a coating that is rough and strong enough to safely walk, cycle or drive on. Under the glass are crystalline silicon solar cells.

The SolaRoad Kit is a brand new product. Based on the SolaRoad bike path in Krommenie, the Netherlands. The first road in the world that converts sunlight into renewable electricity.

SolaRoad is an
initiative of:

dønniq energising
mobility

Strukton
